

Cognizant GenC Coding Questions 2025

Cognizant GenC Coding Questions and Answers 2025

Cognizant GenC has changed the exam pattern for the year 2025. They have divided the Online test into 4 rounds. Cognizant GenC Coding Questions 2025 page will help you to find out sample coding questions for practicing for Cognizant GenC Technical Assessment and Technical Interview.

1. Round –1 (Communication Assessment)
2. Round –2 (Quantitative + Game Based Assessment)
3. Round –3 (Technical Assessment)
4. Round -4 (Technical + HR Interview)

Cognizant GenC Coding Questions with Solutions 2025

Topics	Details(it may vary)
No. of Questions	2 Questions
Time Limit	120 mins (shared)
Difficulty Level	Medium–Hard

Sample Cognizant GenC Coding Questions with Solutions 2025

Question 1

Problem Statement – Write a program to calculate the fuel consumption of your truck. The program should ask the user to enter the quantity of diesel to fill up the tank and the distance covered till the tank goes dry. Calculate the fuel consumption and display it in the format (liters per 100 kilometers).

Convert the same result to the U.S. style of miles per gallon and display the result. If the quantity or distance is zero or negative display "is an Invalid Input".

[Note: The US concept of fuel consumption calculation (distance / fuel) is the inverse of the European concept.

[Note: The US approach of fuel consumption calculation (distance / fuel) is the inverse of the European approach (fuel / distance). Also note that 1 kilometer is 0.6214 miles, and 1 liter is 0.2642 gallons.]

The result should be with two decimal place.To get two decimal place refer the below-mentioned print statement :

Sample Input 1:

- Enter the no of liters to fill the tank
20
- Enter the distance covered
150

Sample Output 1:

- Liters/100KM
13.33
- Miles/gallons
17.64

Explanation:

- For 150 KM fuel consumption is 20 liters,
- Then for 100 KM fuel consumption would be $(20/150)*100=13.33$,
- Distance is given in KM, we have to convert it to miles $(150*0.6214)=93.21$,
- Fuel consumption is given in liters, we have to convert it to gallons $(20*0.2642)=5.284$,
- Then find $(miles/gallons)=(93.21/5.284)=17.64$

Sample Input 2:

- Enter the no of liters to fill the tank
-5

Sample Output 2:

- 5 is an Invalid Input

Sample Input 3:

- Enter the no of liters to fill the tank
25
- Enter the distance covered
-21

Sample Output 3:

- 21 is an Invalid Input

C
Java

```
import java.text.*;

class Main{
public static void main (String[] args) {
DecimalFormat df2 =new DecimalFormat("0.00");
Scanner sc= new Scanner (System.in);

System.out.println("Enter the no of liters to fill the tank");
int ltt =sc.nextInt();
double lt= (ltt*1.00);

if(ltt<1){
System.out.println(ltt+" is an Invalid Input");
System.exit(0);
}
System.out.println("Enter the distance covered");
int diss =sc.nextInt();
double dis= (diss*1.00);

if(diss<1){
System.out.println(diss+" is an Invalid Input");
System.exit(0);
}

double hundered = ((lt/dis)*100);
System.out.println("Liters/100KM");
System.out.println(df2.format(hundered));

double miles = (dis*0.6214);
double gallons =(lt*0.2642);
double mg = miles/gallons;
System.out.println("Miles/gallons");
System.out.println(df2.format(mg));
}
}
```

Python

Question-2

Problem Statement – Vohra went to a movie with his friends in a Wave theatre and during break time he bought pizzas, puffs and cool drinks. Consider the following prices :

- Rs.100/pizza
- Rs.20/puffs
- Rs.10/cooldrink

Generate a bill for What Vohra has bought.

Sample Input 1:

- Enter the no of pizzas bought:10
- Enter the no of puffs bought:12
- Enter the no of cool drinks bought:5

Sample Output 1:

Bill Details

- No of pizzas:10
- No of puffs:12
- No of cooldrinks:5
- Total price=1290

ENJOY THE SHOW!!!

Question-3

Problem Statement – Ritik wants a magic board, which displays a character for a corresponding number for his science project. Help him to develop such an application.
For example when the digits 65,66,67,68 are entered, the alphabet ABCD are to be displayed.
[Assume the number of inputs should be always 4]

Sample Input 1:

- Enter the digits:
65
66
67
68

Sample Output 1:

65-A
66-B
67-C
68-D

Sample Input 2:

- Enter the digits:
115
116
101
112

Sample Output 2:

C

Java

```
import java.util.Scanner;
public class Main
{
    public static void main (String args[])
    {
        Scanner in = new Scanner (System.in);
        System.out.println ("Enter the digits: ");

        int a = in.nextInt ();
        int b = in.nextInt ();
        int c = in.nextInt ();
        int d = in.nextInt ();

        char q = (char) a;
        char w = (char) b;
        char e = (char) c;
        char r = (char) d;

        System.out.println ();
        System.out.print (a);
        System.out.println ("-" + q);

        System.out.print (b);

        System.out.print (c);
        System.out.println ("-" + e);

        System.out.print (d);
        System.out.println ("-" + r);
    }
}
```

Run

Python

Question-4

Problem Statement – FOE college wants to recognize the department which has succeeded in getting the maximum number of placements for this academic year. The departments that have participated in the recruitment drive are CSE,ECE, MECH. Help the college find the department getting maximum placements. Check for all the possible output given in the sample snapshot

Note : If any input is negative, the output should be “Input is Invalid”. If all department has equal number of placements, the output should be “None of the department has got the highest placement”.

Sample Input 1:

- Enter the no of students placed in CSE:90
- Enter the no of students placed in ECE:45
- Enter the no of students placed in MECH:70

Sample Output 1:

- Highest placement
- CSE

Sample Input 2:

Sample Output 2:

- Highest placement
- ECE
- MECH

Sample Input 3:

- Enter the no of students placed in CSE:0
- Enter the no of students placed in ECE:0
- Enter the no of students placed in MECH:0

Sample Output 3:

- None of the department has got the highest placement

Sample Input 4:

- Enter the no of students placed in CSE:10
- Enter the no of students placed in ECE:-50
- Enter the no of students placed in MECH:40

Sample Output 4:

- Input is Invalid

C
Java

```
public class Main {  
    public static void main (String[] args) {  
        // Initialize Scanner object  
        Scanner sc = new Scanner (System.in);  
        // Take user input  
        System.out.print ("Enter the no. of students placed in CSE: ");  
        int cse = sc.nextInt ();  
        System.out.print ("Enter the no. of students placed in ECE: ");  
        int ece = sc.nextInt ();  
        System.out.print ("Enter the no. of students placed in MECH: ");  
        int mech = sc.nextInt ();

                System.out.println ("MECH");  
            }  
        }  
    }  
}
```

Question-5

Problem Statement – In a theater, there is a discount scheme announced where one gets a 10% discount on the total cost of tickets when there is a bulk booking of more than 20 tickets, and a discount of 2% on the total cost of tickets if a special coupon card is submitted. Develop a program to find the total cost as per the scheme. The cost of the k class ticket is Rs.75 and q class is Rs.150. Refreshments can also be opted by paying an additional of Rs. 50 per member.

Hint: k and q and You have to book minimum of 5 tickets and maximum of 40 at a time. If fails display “Minimum of 5 and Maximum of 40 Tickets”. If circle is given a value other than ‘k’ or ‘q’ the output should be “Invalid Input”.

The ticket cost should be printed exactly to two decimal places.

Sample Input 1:

- Enter the no of ticket:35
- Do you want refreshment:y
- Do you have coupon code:y
- Enter the circle:k

Sample Output 1:

- Ticket cost:4065.25

Sample Input 2:

- Enter the no of ticket:1

Sample Output 2:

- Minimum of 5 and Maximum of 40 Tickets

C
Java

Sample Output 1:

2 3 5 7 11 13

Sample Input 2:

8

5

Sample Output 2:

- Provide valid input

C

Java

Run

```
import java.util.*;
public class Main
{
    public static void main (String[] args) {

        Scanner sc=new Scanner(System.in);
        int a=sc.nextInt();
        int b=sc.nextInt();
        int flag;

        if(a<=0 || b<=0 || a>=b)
            System.out.println("Provide valid input");
        else{
            Inner:
            while(a<=b){
                if(a==2)
                    System.out.print(a+" ");
                else if(a==1){
                    a++;
                    continue;
                }
                else{
                    flag=0;
                    outer:
                    for(int i=2;i<=a/2;i++){
                        if(a%i==0){
                            flag=1;
                            break outer;
                        }
                    }

                    if(flag==0)
                        System.out.print(a+" ");
                }
                a++;
            }
        }
    }
}
```

Python

Problem Statement – Goutam and Tanul plays by telling numbers. Goutam says a number to Tanul. Tanul should first reverse the number and check if it is same as the original. If yes, Tanul should say “Palindrome”. If not, he should say “Not a Palindrome”. If the number is negative, print “Invalid Input”. Help Tanul by writing a program.

Sample Input 1 :

21212

Sample Output 1 :

Palindrome

Sample Input 2 :

6186

Sample Output 2 :

Not a Palindrome

C

Java

```
import java.util.Scanner;
public class Main
{
    public static void main (String args[])
    {
        Scanner in = new Scanner (System.in);
        int n = in.nextInt ();
        int sum = 0, r;
        int temp = n;

        if (n > -1)
        {
            while (n > 0)
            {
                r = n % 10;
                sum = (sum * 10) + r;
                n = n / 10;
            }
            if (temp == sum)
                System.out.println ("Palindrome");
            else
                System.out.println ("Not a Palindrome");
        }
        else
        {
            System.out.println ("Invalid Input");
        }
    }
}
```

Run

Cognizant GenC Coding Questions

Question-9

XYZ Technologies is in the process of increment the salary of the employees. This increment is done based on their salary and their performance appraisal rating.

1. If the appraisal rating is between 1 and 3, the increment is 10% of the salary.

Help them to do this, by writing a program that displays the incremented salary. Write a class “IncrementCalculation.java” and write the main method in it.

Note : If either the salary is 0 or negative (or) if the appraisal rating is not in the range 1 to 5 (inclusive), then the output should be “Invalid Input”.

Sample Input 1 :

- Enter the salary

8000
- Enter the Performance appraisal rating

3

Sample Output 1 :

8800

Sample Input 2 :

- Enter the salary

7500
- Enter the Performance appraisal rating

4.3

Sample Output 2 :

9750

Sample Input 3 :

- Enter the salary

-5000
- Enter the Performance appraisal rating

6

Sample Output 3 :

- Invalid Input

Java

class Main {
public static void main (String[] args) {

Scanner sc = new Scanner (System.in);

System.out.println("Enter the salary");

int salary = sc.nextInt();

System.out.println("Enter the Performance appraisal rating");

float rating = sc.nextFloat();

if(salary<1||rating<1.0||rating>5.0){

System.out.println("Invalid Input");

System.exit(0);

}

else if(rating>=1&&rating<=3){ salary=salary+(int) (0.1*salary);
System.out.println(salary); } else if(rating>3&&rating<=4){ salary=salary+(int) (0.25*salary); System.out.println(salary); } else /*if(rating>4&&rating<=5)*/{

salary=salary+(int) (0.3*salary);

System.out.println(salary);

}

}

}

}

}

C

Question-10

Problem Statement – Chaman planned to choose a four digit lucky number for his car. His lucky numbers are 3,5 and 7. Help him find the number, whose sum is divisible by 3 or 5 or 7. Provide a valid car number, Fails to provide a valid input then display that number is not a valid car number.

Note : The input other than 4 digit positive number[includes negative and 0] is considered as invalid.

Refer the samples, to read and display the data.

Sample Input 1:

- Enter the car no:1234

Sample Output 1:

- Lucky Number

Sample Input 2:

- Enter the car no:1214

Sample Output 2:

- Sorry its not my lucky number

Sample Input 3:

- 14 is not a valid car number

Java

Run

```
import java.util.*;
class Main {
    public static void main (String[]args)
    {
        int sum = 0;
        Scanner sc = new Scanner (System.in);
        System.out.print ("Enter the car no:");
        int carNum = sc.nextInt ();
        if (carNum < 1000 || carNum > 9999)
        {
            System.out.println (carNum + " is not a valid car number");
        }
        else
        {
            while (carNum != 0)
            {
                int l = carNum % 10;
                sum = sum + l;
                carNum = carNum / 10;
            }

            if (sum % 3 == 0 || sum % 5 == 0 || sum % 7 == 0)
            {
                System.out.println ("Lucky Number");
            }
            else
            {
                System.out.println ("Sorry its not my lucky number");
            }
        }
    }
}
```

C++

Question-11

Problem Statement –

IIHM institution is offering a variety of courses to students. Students have a facility to check whether a particular course is available in the institution. Write a program to help the institution accomplish this task. If the number is less than or equal to zero display “Invalid Range”.

Assume maximum number of courses is 20.

Sample Input 1:

- Enter no of course:

5

- Enter course names:

Java

Oracle

C++

Question-12

Problem Statement – Mayuri buys “N” no of products from a shop. The shop offers a different percentage of discount on each item. She wants to know the item that has the minimum discount offer, so that she can avoid buying that and save money.

[**Input Format:** The first input refers to the no of items; the second input is the item name, price and discount percentage separated by comma(,)]

Assume the minimum discount offer is in the form of Integer.

Note: There can be more than one product with a minimum discount.

Sample Input 1:

4

mobile,10000,20

shoe,5000,10

watch,6000,15

shoe

Explanation: The discount on the mobile is 2000, the discount on the shoe is 500, the discount on the watch is 900 and the discount on the laptop is 1750. So the discount on the shoe is the minimum.

Sample Input 2:

4

Mobile,5000,10

shoe,5000,10

WATCH,5000,10

Laptop,5000,10

Sample Output 2:

Mobile

shoe

WATCH

Laptop

Java

```
import java.io.*;

public class Main{

    public static void main (String[] args) throws IOException{
        BufferedReader br=new BufferedReader(new InputStreamReader(System.in));
        Scanner sc=new Scanner(System.in);
        int num = Integer.parseInt(br.readLine());
        int itemPrice[] = new int[num];
        int itemDis[] = new int[num];

        String itemName[] = new String[num];
        //String[] values;
        float dis[] = new float[num];
        String[] input = new String[num];
        for(int i=0;i< num;i++)
        {
            String s[]= br.readLine().split(",");
            itemName[i] =s[0];
            //System.out.println(itemName[i]);
            itemPrice[i]=Integer.parseInt(s[1]);
            // System.out.println(itemPrice[i]);
            itemDis[i]=Integer.parseInt(s[2]);
            // System.out.println(itemDis[i]);
            //float x = itemDis[i]
            dis[i]=(float)((itemDis[i]*itemPrice[i])/100);
            // System.out.println(dis[i]);
        }

        int idx[]=new int[num];
        int j=0;
        float min= Float.MAX_VALUE;
        for(int i=0;i< num;i++){
            if(dis[i]<=min)
            {
                min=dis[i];
                idx[j++]=i;
                //System.out.println(min);
            }
        }
        for(int i=0;i< j;i++){
            System.out.println(itemName[idx[i]]);
            //System.out.println(idx[i]);
        }
    }

}

Question-13

Problem Statement – Raj wants to know the maximum marks scored by him in each semester. The mark should be between 0 to 100 ,if goes beyond the range display “You have entered invalid mark.”

Sample Input 1:

- Enter no of semester:

3
- Enter no of subjects in 1 semester:

3
- Enter no of subjects in 2 semester:

2

- Marks obtained in semester 1:

50
60
70

- Marks obtained in semester 2:

90
98
76
67

- Marks obtained in semester 3:

89
76

Sample Output 1:

- Maximum mark in 1 semester:70
- Maximum mark in 2 semester:98
- Maximum mark in 3 semester:89

Sample Input 2:

- Enter no of semester:

3

- Enter no of subjects in 1 semester:

3

- Enter no of subjects in 2 semester:

4

- Enter no of subjects in 3 semester:

2

- Marks obtained in semester 1:

55
67
98

- Marks obtained in semester 2:

67
-98

Sample Output 2:

You have entered invalid mark.

```
import java.lang.*;
import java.io.*;
class Main{
    public static void main (String[] args) throws java.lang.Exception{
        Scanner sc = new Scanner (System.in);
        System.out.println("Enter no of semester:");
        int sems = sc.nextInt();
        boolean incorrect = false;
        int arr[] = new int [sems];

        for(int i=0;i< sems;i++) {
            System.out.println("Enter no of subjects in "+(i+1)+" semester:");
            arr[i]=sc.nextInt();
        }
        int maxMarks[] = new int[sems];
        for(int i=0;i< sems;i++) {
            System.out.println("Marks obtained in semester "+(i+1)+":");
            int max = sc.nextInt();
            if(max<0||max>100) {
                System.out.println("You have entered invalid mark.");
                System.exit(0);
            }
            for(int j=1;j< arr[i];j++) {
                int marks=sc.nextInt();
                if(marks<0||marks>100)
                {
                    System.out.println("You have entered invalid mark.");
                    System.exit(0);
                }

                if(max< marks)
                    max=marks;

            }
            maxMarks[i]= max;
        }
        for(int i=0;i< sems;i++) {
            System.out.println("Maximum mark in "+(i+1)+" semester:"+maxMarks[i]);
        }

    }

}
```

Question-14

Problem Statement – Bela teaches her daughter to find the factors of a given number. When she provides a number to her daughter, she should tell the factors of that number. Help her to do this, by writing a program. Write a class FindFactor.java and write the main method in it.

Note :

- If the input provided is negative, ignore the sign and provide the output. If the input is zero
- If the input is zero the output should be “No Factors”.

Sample Input 1 :

54

Sample Output 1 :

-1869

Sample Output 2 :

1, 3, 7, 21, 89, 267, 623, 1869

Java

```
import java.util.*;
public class Main{
public static void main(String[] args){
    int i;
    Scanner sc = new Scanner (System.in);
    int num = sc.nextInt();
    if(num==0){
        System.out.println("No Factors");
    }
    else if(num>0){
        for(i=1;i< num;i++){
            if(num%i==0){
                System.out.print(i+", ");
            }
        }
        System.out.println(num);
    }
    else{
        num=num*-1;
        for(i=1;i< num;i++){
            if(num%i==0){
                System.out.print(i+", ");
            }
        }
        System.out.println(num);
    }
}
}
```
